

Welcome to Zillow Preferred

57 minutes including practice · 17 screens

Edition 2026-09-13-day1-simulation-v2

Before you begin

Eric opens Rep, selects the training and existing agents across teams, confirms the timezone, and creates the session. The creator is the default presenter and follow-up coach. Keep the private presenter console on your screen and share the separate presentation window.

Ask each selected agent to open the session through their own existing login. No second invitation is needed. Confirm that everyone can join and see the current activity. Submit written work before showing the model. Give one correction, then ask for a targeted retry. Open activities under presenter control; advancing leaves unfinished work available for catch-up. Show help requests and connection problems separately.

In self-paced study, notes remain in the learner's browser until they choose to share them. In a live session, the presenter sees submitted answers and progress; unsubmitted writing stays private. Preserve first attempts; a retry after an example is assisted.

For remote practice, use the meeting platform's breakout rooms. Assign pairs or trios and rotate agent, buyer, and observer. In pairs, the buyer gives feedback. Every agent needs a speaking turn, one correction, and a retry. If a partner is absent, assign a coach or leave the observation outstanding.

Follow Up Boss practice

Stay in the assigned TrueHQ session for the whole class. Every learner uses their own login and simulated record. The People list is a reference image: review the controls and submit a navigation explanation here. The simulator opens inside a contact; no separate Follow Up Boss account or training pond is needed. This walkthrough does not verify hands-on search. Arrange any coach-observed search check separately after class. Preserve the repair diagnosis step.

Coach where to click, save, and verify. The server check validates saved actions; it does not judge note usefulness. After a passed record changes, check it again. Each exercise is a separate scenario. The 57-minute allocation is a pilot; extend practice rather than skipping attempts.

What each signal means

Connection status is separate from participation. A submitted answer is separate from a completed action. A record check is separate from writing quality. Record who observed a speaking turn and who reviewed it; a peer observation or self-check is not coach sign-off. Practice readiness, quiz certification, and activation remain separate.

Facilitator flow

01 / 17 · 0-1 min · Find the contact

Your Day 1 workspace

Before class, create the Day 1 session using the updated lesson. Confirm each selected learner can join through their own TrueHQ login. Keep the presenter console private and share the presentation window. Explain the team's actual lead routing verbally: a live buyer connection, tour request, and touring alert are different events; a request alone is not an appointment. Then use the on-screen references and simulator throughout. Do not send learners to a separate Follow Up Boss account. Watching the presenter is not completing an individual exercise.

Ask the room: Can everyone see this session in their own TrueHQ account?

02 / 17 · 1-2 min · Find the contact

Start in People

Stay in TrueHQ and enlarge the reference image. Point out People, search, smart lists, and filtering. Ask learners which controls they would use and how they would confirm the source and recent activity. This is a walkthrough, not a completed search task. The simulator begins inside a contact; no external account is needed for today's class.

Ask the room: Which control would you use to find a contact by name?

03 / 17 · 2-4 min · Find the contact

Explain how you would find Avery

Open the written activity and have every learner submit their own navigation explanation in TrueHQ. Ask one learner to talk through the image, then clarify missed controls. Do not require a search in a separate training pond. This response shows navigation understanding, not verified hands-on search. If needed, arrange a separate coach-observed navigation check in the team's Follow Up Boss training account after class; it is not a prerequisite for today's simulated record exercises.

Ask the room: Explain the path you would take, then submit your own answer here.

Participant task: Using the People-list reference, explain how you would find Avery and confirm the source, assignment, and recent activity. Stay in TrueHQ.

- Using the reference image, how would you find Avery and confirm the correct record? Name any control you need help finding.

04 / 17 · 4-5 min · Read the record

Check the Details panel

Use this reference image to point out Stage, Assigned, Source, and Timeframe. The image itself is not editable. Timing should come from the buyer, not a guess. On the next exercise, demonstrate the stage menu and green save check in the simulator, then let every learner attempt the task on their own screen.

Ask the room: Which detail would you verify before saving?

Practice: save the appointment stage

Open this activity for the learners. Each person works in their own simulated record inside this TrueHQ session; do not open Follow Up Boss or repeat the update in another account. Read this exercise's scenario: each is a separate fictional case, so changes do not carry into the next case. Let the learner find the control before offering a hint. Preserve the repair diagnosis step where present. Save and check the work here; in a live session the check submits the result to the presenter. A passed check validates the required saved actions, not note quality or overall readiness. Reopen and verify changes, and check again after editing a passed record.

Ask the room: Complete this case on your own screen, save, and check your work.

Participant task: Work in the simulated record below. Save your changes, then check your work here.

Write what the next agent needs

Ask what the example tells the next caller. Then complete the note exercise. Coach one missing fact rather than rewriting the entire note for the agent. Keep source, assignment, and history in view. Background information suggests a question; it does not establish finances, family circumstances, timing, or readiness. The note check measures saving an action, not writing quality.

Ask the room: Could someone follow up using only this note?

Practice: write the conversation note

Open this activity for the learners. Each person works in their own simulated record inside this TrueHQ session; do not open Follow Up Boss or repeat the update in another account. Read this exercise's scenario: each is a separate fictional case, so changes do not carry into the next case. Let the learner find the control before offering a hint. Preserve the repair diagnosis step where present. Save and check the work here; in a live session the check submits the result to the presenter. A passed check validates the required saved actions, not note quality or overall readiness. Reopen and verify changes, and check again after editing a passed record.

Ask the room: Complete this case on your own screen, save, and check your work.

Participant task: Work in the simulated record below. Save your changes, then check your work here.

Give the follow-up a date and time

Explain the difference between a note and a task. The note records history; the task schedules the next action. Complete the missed-call exercise next.

Ask the room: What makes a task usable tomorrow?

Practice: set the missed-call task

Open this activity for the learners. Each person works in their own simulated record inside this TrueHQ session; do not open Follow Up Boss or repeat the update in another account. Read this exercise's scenario: each is a separate fictional case, so changes do not carry into the next case. Let the learner find the control before offering a hint. Preserve the repair diagnosis step where present. Save and check the work here; in a live session the check submits the result to the presenter. A passed check validates the required saved actions, not note quality or overall readiness. Reopen and verify changes, and check again after editing a passed record.

Ask the room: Complete this case on your own screen, save, and check your work.

Participant task: Work in the simulated record below. Save your changes, then check your work here.

Nurture needs a conversation

Give everyone two minutes to write before discussing. Compare two contrasting responses, then explain the team's actual nurture rule and why it applies. Do not invent a timeline, assume silence means nurture, or impose a follow-up standard beyond the doctrine's first-week rule. There is no automatic grade. Review the evidence and preserve an owned next action.

Ask the room: What evidence changes your decision, and what still needs to happen?

Participant task: Compare the engaged, later-timeline buyer with the record that went quiet.

- For each case, what evidence would you need before moving this lead to nurture?
- What next action would remain, and who owns it?
- When would you review the record again?

Coach-led discussion. No automatic grade. Explain the team rule and ask for evidence; do not invent a nurture timeline.

Repair Avery's record

Give one minute to inspect without solving it for the agent. The next original exercise requires the learner to name the changes before editing. Do not bypass its diagnosis step; discuss the evidence after the learner attempts it.

Ask the room: What would you fix first, and why?

Practice: repair Avery's record

Open this activity for the learners. Each person works in their own simulated record inside this TrueHQ session; do not open Follow Up Boss or repeat the update in another account. Read this exercise's scenario: each is a separate fictional case, so changes do not carry into the next case. Let the learner find the control before offering a hint. Preserve the repair diagnosis step where present. Save and check the work here; in a live session the check submits the result to the presenter. A passed check validates the required saved actions, not note quality or overall readiness. Reopen and verify changes, and check again after editing a passed record.

Ask the room: Complete this case on your own screen, save, and check your work.

Participant task: Work in the simulated record below. Save your changes, then check your work here.

Check the record before moving on

Ask agents to check their own work. Introduce the deal exercise: once an offer is accepted, update the stage and record the deal details.

Ask the room: Which check would catch an unsaved stage?

Practice adding a deal

Demonstrate this in-session deal form with fictional details. It is a warm-up, not a submitted record check. Every learner then completes the accepted-offer record exercise in their own session; that exercise saves and checks the required deal actions.

Ask the room: What would you check before creating this deal?

Practice: record the accepted offer

Open this activity for the learners. Each person works in their own simulated record inside this TrueHQ session; do not open Follow Up Boss or repeat the update in another account. Read this exercise's scenario: each is a separate fictional case, so changes do not carry into the next case. Let the learner find the control before offering a hint. Preserve the repair diagnosis step where present. Save and check the work here; in a live session the check submits the result to the presenter. A passed check validates the required saved actions, not note quality or overall readiness. Reopen and verify changes, and check again after editing a passed record.

Ask the room: Complete this case on your own screen, save, and check your work.

Participant task: Work in the simulated record below. Save your changes, then check your work here.

Where will you start tomorrow?

Give 30 seconds without notes. Then ask partners to compare. Revisit only the missing item, not the entire lesson. This is a discussion of later real-work application, not an instruction to leave the session or update a client during class.

Ask the room: After class, how will you use this routine in Follow Up Boss?

Participant task: Explain here how you will use tasks and new leads to plan your next calls after training.

- Without looking back: what belongs in a useful contact record?

Before your next client conversation

In live sessions, closing the session creates 24-hour recall, three-day fresh-case, and seven-day coach-review assignments. Confirm each agent's named coach and session timezone. Agents see due work in Rep; the daily digest links to due or reviewable work. In self-paced study, arrange these checks with a coach. Without a relevant client opportunity, use a fresh fictional case and label real-work application not yet observed. Practice readiness is separate from quiz certification and activation.

Ask the room: Tell your partner what you will practice and when.

Participant task: Make the record update part of finishing the conversation.

- After my next call, I will complete ____ before moving on.
- My next follow-up block starts in ____.
- My named coach and the example we will review.

After the workshop

Live session: closing the session creates assignments for recall within 24 hours, a fresh case in three days, and coach review in seven days. The session creator owns follow-up across the selected teams unless a different authorized coach was selected. Confirm the displayed session timezone. Due and overdue work appears in Rep; the daily digest links to work due or awaiting review.

Self-paced study: arrange those same checks with a coach. If there has been no relevant client opportunity, use a new fictional case and mark real-work application as not yet observed.

Keep the first attempt and correction. A useful follow-up asks whether the agent can apply the skill in another case.

References and certification

Updated September 12, 2026 from the existing Day 1 workshop and Eric's approved interactive-training plan. TRU sales doctrine remains the source for coaching the first call and follow-up.

- Your coach and approved team workflow.

Existing quizzes, pass thresholds, and certification records continue through the normal Rep course flow. The presentation link is not a certification attempt.
